

Data set

All Inter99 data has been collected in one data set which is situated at Danmarks Statistik (Danish Statistics) www.dst.dk

The data set contains among other things information on:

- Time of data collection (baseline, one, three, or five years)
- Group (A, B or C)
- Socio-demographic information (sex, age, education etc.)
- Original questions and answers
- Blood sample results and results of the health examination
- Computed variables (incl. information on how these were computed)

If you are a researcher and would like to use the Inter99 data in your research you have to contact the Principal Investigator, Chief Physician, Professor, D.M.Sci., Torben Jørgensen.

Please send an e-mail to the editor and we will contact you.
